

# Interoperability e-Births

**Genís**

**At the heart of e-Government**

With the use of web services Genís has automated birth registration in maternity hospitals.

**[e-Government]**

**The e-Births service of electronic birth registration by Genis enables Slovenian maternity hospitals instant filing of claims for assigning a unique personal identification number (PIN) and registration of a birth and the newborn's residence address.**

## Friendly public administration

e-Births simplify administration in maternity hospitals and save parents time when going to the Administration Unit. Service with automated procedures which reduce the time needed for obtaining a PIN, tax number, medical card and other documents for the newborn.

## Quality data

Electronic birth registration improves the quality and updateness of data for medical statisticians and analysts, internal governmental affairs, Social Work Centers, Health Insurance Institute of Slovenia, Tax Administration and Statistical Office of the Republic of Slovenia. Confidentiality and safety of data is ensured in accordance with legislative requirements and safety policies.

## Efficient technologies

The e-Births service enables automated execution of the entire birth registration process. It connects, through web services, hospital information systems with the Central Population Register and later with the Civil Register and Register of Permanent Population. Depending on the quality of data, PIN in Central Population Register is defined either automatically or manually – through web portal.
