Permanent Population Register

Genis' information solution for the Permanent Population Register (PPR) provides the Slovenian government administration with a powerful foundation for realizing the potential of e-business.

[e-Government]

PPR is one of two key sources of data for the CPR which is pivotal to supporting e-Government. Together with the CPR, Genis significantly contributed to the optimization of internal working processes in public administration, enabling higher service quality for citizens and businesses.

Permanent Population Register

The PPR contains and manages information about individuals who have permanent or temporary residence in the Republic of Slovenia, have permanently or temporarily left the Republic of Slovenia for more than three months, or have been removed from the register, as well as information about households and voters.

Convenience for citizens

Complete informatization allows any citizen to access personal data and certificates at any administrative office or through electronic administrative services.

High performance, reliable

Genis solution for PPR is based on the database server Oracle and application server IBM WebSphere. As the application is web based, access to the applications functionalities is provided through the standard web browser Internet Explorer. For producing innovative interoperability services for the G2C, G2B and G2G operations SOA concept of application development and integration is used.
